

# Bunded Diesel Fuel Tank

## Technical Information:

- 27,000 Litre / 7,000 gallon double wall fuel tank.
- Built in a 20' ISO Hi-Cube container format.
- Secondary containment is 110% of the inner tank.
- Internal baffles to prevent sloshing during transport.
- 3" fill line, with overfill protection valve.
- 2" fuel feed and return lines (the fuel is constantly circulated to the machines and back, to keep it cool in summer and prevent freezing in winter).
- Air or electric operated transfer pump.
- Clock type tank contents gauge.
- Float secondary containment monitor.
- Electronic Audible and visual alarm for primary tank and secondary containment.
- Lockable front cabinet area with drip tray.
- Fire extinguisher and safe markings.
